

twr = Baby Tower
 cb = 6 way Corner Block

The truss sections are Thomas 12x12 GP (general purpose). The 40' span can hold a distributed static load of 855 pounds with a point load of 428 pounds. You can hang from US-DS truss as well. The Supports are Thomas Baby Towers and can support 2000 pounds each with a max height of 25'. The grid can raise and lower with hand winches, but the entire grid must move together. Exact specs are available at www.jthomaseng.com.
